Skills and Certifications

- **SIEM:** Splunk (SPL, alert tuning), Wazuh (SIEM/XDR), Sysmon
- **Networking:** TCP/IP, DNS, HTTP/S, Wireshark, Nmap, pfSense
- **Endpoint and IR:** EDR concepts, Active Directory, incident triage, escalation SOPs, phishing analysis
- **OS and Cloud:** Windows Server, Linux (Kali), PowerShell, Bash, AWS
- **Languages:** Python, PowerShell, Java, JavaScript

Projects

Hybrid Home Lab

- Hybrid security lab spanning AWS and a local machine, simulating enterprise network conditions for hands-on detection and response practice.

SOC Automation Platform

- Python-based automation layer on Wazuh targeting alert triage, incident enrichment, and response orchestration to reduce manual analyst overhead.

IDS and Honeypot Analysis

- Deployed Wazuh (SIEM/XDR) alongside a honeypot; correlated Wireshark captures with alerts across 200+ log events, achieving 100% detection on 4 simulated intrusion categories through tuned thresholds and false positive analysis.

Education

King Fahd University of Petroleum and Minerals (KFUPM)

Dhahran, Saudi Arabia

B.Sc. Software Engineering — Cybersecurity and Blockchain

GPA: 3.458 / 4.0

CompTIA Security+

AWS Cloud Practitioner

CS50 Introduction to Cybersecurity

Experience

SDAIA-KFUPM Joint Research Center for AI

2024

AI Trainer

- Engineered an AI-powered Big Five personality assessment tool using factor analysis algorithms, accurately classifying users into distinct personality profiles based on multiple-choice response patterns.
- Designed and launched a full-stack web platform integrating the AI personality assessment tool end-to-end, delivering an interactive user experience and reducing manual scoring effort to zero through full automation.
- Applied dimensionality-reduction techniques to transform raw survey responses into 5 clean personality classifications, achieving full separation across all Big Five trait dimensions.
